IRIS AND THE OPEN ACCESS POLICY OF IMT SCHOOL

Brief presentation
IRIS is the new system adopted by IMT to collect and manage bibliographic data of research output published by our faculty and PhD students.
IRIS is freely available worldwide. This allows a wide dissemination of scientific publications, also favoring a greater impact and an increase in citations.
IRIS allows the application of the principles described in IMT Open Access Policy, that establish the publication of an open access version of each deposited item (with some exceptions).
Once clicked on Login button, the system will automatically open the U-GOV authentication page. User’s credentials are the same used for IMT Intranet.
To insert a new product, we recommend to use the research for identifier tool that allows you to import bibliographic data from publisher’s website or selected database.
Anyway we suggest to check all the imported data (e.g. correct page numbering format) and to complete the record with all the information held (language, URL, abstract).
Please also check that all author names have been imported correctly. Internal author are automatically recognised.
Our Open Access policy provides that every deposited item should be accompanied by an open access version of the publication (depending on publisher’s copyright policies).
When you are depositing a journal article in IRIS, Sherpa Romeo will automatically open the information regarding copyright policies of the journal publisher, helping you in choosing the right open access version.
It is also possible to attach more than 1 file to the record and decide which of the PDFs to send to the LoginMiur page. (E.g. you can choose to attach a pre-print version and a publisher version too, and decide to make available to anyone the first one, but not the second one, that will be sent to the LoginMiur page).
THANK YOU!
